SOUTH CAROLINA

Child Development Research

Lab Director: Jane Roberts, Ph.D.

This study has been reviewed and approved by the USC Institutional Review Board

Children experience amazing development across the early childhood years. We are interested in learning about the nature of child development and the experiences of children's families associated with either the full mutation or premutation of fragile X.

This study includes assessments that can take place either in the child's home or at USC. Travel expenses to USC will be covered, and compensation for participation will be provided.

Who can take part in this study?

We are recruiting children who:

- ❖ Have been diagnosed with Fragile-X syndrome (12 months or younger)
- ❖ Have been diagnosed with Fragile-X premutation (ages 1-8 years old)

How can I get more information?
